AI-ROBOTS: SMART WAREHOUSE LOGISTICS

52' (ENG, GER)

Autonomous robots are revolutionizing warehouse logistics – gradually replacing humans in the material flow of the future.

Smart warehouse systems and innovative AI solutions are driving unprecedented speed, safety, and efficiency in global intralogistics. This documentary offers exclusive insights into a future where robots take center stage – from fully automated picking systems to AI-driven fleets operating around the clock without human intervention. Companies worldwide are investing millions in automation to overcome labor shortages, reduce costs, and optimize their supply chains. The market for robotics and AI in warehouse logistics is growing rapidly and becoming a key economic driver. Pioneers in intralogistics, leading institutes, universities, global technology companies, and visionary startups are already developing the next generation of autonomous systems, pushing efficiency to an entirely new level.

Original Title: KI-Roboter: Logistik der Zukunft

Year: 2025
