

NATURE . WILDLIFE

OUR NEW WORLD

3 x 52' (ENG, GER)

Our planet is in a state of flux. Entire ecosystems are transforming under the pressure of a rapidly changing climate.

From mountain peaks to coral seas, habitats are shifting. Species – both animal and plant – must adapt or vanish. Human-made emissions have disrupted nature's balance. However, there are people on the front lines, doing what they can to face this transformation head-on. Climate change affects more than just wildlife. It alters the natural rhythms of Earth itself. Droughts and heatwaves are drying out once fertile land, while alpine regions are seeing the opposite: snow and ice retreat, and green takes over. In the oceans, temperate waters are becoming warm enough to host tropical life. The very identity of places is being rewritten.

Original Title:	Unsere neue Welt
Year:	2025
Produced by:	Boréales, Federation Studios, Lionfish Films, Terra Mater Studios
Partners:	Servus TV, France Télévisions, USHUAIA TV, CNC, RTS Radio Télévision Suisse

1. The Pulse of Change

In this episode, four characters, on four different continents are confronted to the incredible transformation of their environment. They witness the change in behavior of animal and plants around them and actively look for solutions to adapt and prevent conflict between humans and wildlife that arise as territory and resources are becoming scarcer.

2. A Wild Renaissance

In this episode, five ecosystems are entirely transformed by climate change. Ice fields and underwater forests disappear and give birth to totally new ecosystems, sometimes even richer than the previous ones.

3. The Carbon Hunters

Around the globe, an army of scientists is mobilizing to unlock the secrets of nature's unique ability to capture and store carbon dioxide. Where are these carbon traps located? How much CO2 can they capture? The Carbon Hunters reveals how nature is more than ever our best ally against climate change.
